

ÖMER HALİS DEMİR

FULL STACK WEB DEVELOPER

ELECTRIC ELECTRONIC ENGINEER

PROFILE

My childhood curiosity about how systems work found an analytical foundation through my engineering education. While my academic background in circuits and systems analysis provided me with a strong vision, I discovered my true passion in the software world, where boundaries are defined only by imagination. For me, coding is the modern equivalent of what I did as a child: putting pieces together to build functional structures from scratch.

Today, as a **Full Stack Developer** with exactly five years of professional web development experience, I blend my engineering discipline with the creative power of software. In **Frontend** architecture, I build dynamic user experiences with **JavaScript**, **TypeScript**, **React**, and **Next.js**; craft modern, responsive designs using **Tailwind CSS**, **Bootstrap**, **HTML**, and **CSS**, and successfully manage complex structures with **Redux**. On the **Backend**, I build secure and scalable **RESTful API** infrastructures within **Node.js** and **Express.js** environments. For **Data management** processes, I deliver high-performance data solutions by integrating various database systems like **MySQL**, **PostgreSQL**, and **MongoDB** using the power of **Prisma ORM**. I manage the entire development lifecycle via **Git** and **GitHub**, and provide end-to-end integration for payment systems such as **iyzico** and **payTR** in e-commerce or corporate projects. My greatest motivation is to transform technology into user-centric, high-performance, and scalable digital solutions that make people's lives easier, while constantly maintaining my passion for learning.

EXPERIENCE

Freelance | Full Stack Developer | 2023 - Present

- Successfully delivered a total of 8 end-to-end website projects from ideation to deployment using modern technologies. Detailed information and source codes for all my projects are available on my personal website.
- Managed digitalization processes by developing custom corporate web solutions for professionals across various sectors, including financial consultancy, clinical psychology, and e-commerce (Profilo branch).
- Launched my personal startup, the **IQfinansAI** financial management platform, as a fully comprehensive product developed with **Next.js** and AI integration.
- Delivered projects meeting international standards by actively driving business development on global and local freelance platforms such as Upwork, Fiverr, and Bionluk.
- Leveraging exactly five years of professional web development experience, I built both **frontend** and **backend** architectures using modern, scalable, and performance-driven technologies.
- Provided solutions that enhanced brands' digital visibility and operational efficiency through user experience (UX) and SEO-focused approaches.

EDUCATION & COURSES & CERTIFICATES

Istanbul Commerce University (Education):

- Electrical and Electronics Engineering | 2018-2023**

Europe Coding School (Certificate) :

- Full Stack Developer | 2023**

Udemy (Course) :

- Web Development | 2022**
- E-Commerce Website Development | 2022**
- Full-Stack React | 2021**

Kaan Academy (Course) :

- Java & OOP | 2020**

INFORMATION & COMMUNICATION

- Date of Birth:** 29.03.1998
- Military Service Status:** Exempt
- Marital Status:** Single
